

Investment strategy

To provide a solution for investors seeking a diversified investment to grow their capital over the medium and long term (more than five years), while accepting medium volatility.

The portfolio will be weighted towards investment securities that we believe are highly rated for the incorporation of Environmental, Social and Governance (ESG) factors into their investment decision-making, and are expected to have a positive impact on society.

Investment objectives

- > You want to protect your capital, but also see some growth in the medium term.
- > You are not comfortable with significant fluctuations in your portfolio, but you understand that medium risk is needed to achieve more growth over the long term.
- > You would accept a potential loss in one year out of every three.

Projected performance

The after-tax, after management fee expected annual return distribution over the long term (below) is based on index data collected since 1993. Actual performance may be different.

A 28% tax rate is assumed, and the effect of the tax rules on the various asset types is calculated. Management fees are assumed at the index fund level. The Select Service and the Adviser Service Fees are not included.

| Positive Impact Balanced | |
|--------------------------------------|--------------|
| Mean Annual Return | 4.4% |
| Probability of loss in any one year | 31.0% |
| Years with negative return expected* | 1 in 3 years |
| Expected 10 year return | 50% |
| Expected 20 year return | 124% |

*The balanced asset allocation expects to have a negative return every 3 years.

Selected Positive Impact Balanced Portfolio Investment mix as at July 2022 to current

What are the risks of investing?

Risk indicator for the Selected Positive Impact Balanced Portfolio:
Potential lower returns Potential higher returns

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the security's assets goes up and down. A higher risk generally means higher potential returns over time, but more ups and downs along the way.

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

See the Investor Information booklet for more information about the risks associated with investing in this portfolio.

To help you clarify your own attitude to risk, talk to your financial adviser.

Disclaimer: Market index returns have been used to determine the Risk Indicator for the portfolios, as these are not unitholded investment vehicles and consequently do not have a unit price that can be used for volatility calculations. The portfolios are comprised of a variety of underlying assets whose actual performance can be expected to vary from the benchmark index used for each asset class. Consequently, the Risk Indicator may therefore provide a less reliable indicator of the potential future volatility of these portfolios.

Minimum investment

- > Initial investment: \$10,000
- > Additional investment: \$2,000
- > Regular investment: \$500 p.m. or \$250 p.m. with a minimum \$10,000 investment.
