

Investment strategy

To provide a solution for investors seeking a diversified investment to grow their capital over the medium term (more than five years) with low to medium volatility.

The portfolio will be weighted towards investment securities that we believe are highly rated for the incorporation of Environmental, Social and Governance (ESG) factors into their investment decision-making, and are expected to have a positive impact on society.

Investment objectives

- > You are more comfortable with stable investments and are not willing to accept much risk.
- > However, if you have a longer time horizon, you are willing to accept a low to medium level of volatility in your returns over the short term, as long as in the medium term, the value of your capital is preserved.
- > You would accept a potential loss in one year out of every four.

Projected performance

The after-tax, after management fee expected annual return distribution over the long term (below) is based on data collected since 1993.

A 28% tax rate is assumed, and the effect of the tax rules on the various asset types is calculated. Management fees are assumed at the index fund level. The Select Service and the Adviser Service Fees are not included.

Positive Impact Conservative	
Mean Annual Return	2.8%
Volatility (Standard Deviation)	3.9%
Probability of loss in any one year	24.0%
Years with negative return expected*	4 years
Expected 10 year return	30.5%
Expected 20 year return	70.2%

*The positive impact conservative asset allocation expects to have a negative return every 4 years.

Selected Positive Impact Conservative Portfolio Investment mix as at November 2021 to current

^ Clarity Funds Management Limited, Devon Funds Management Limited, JMI Wealth Limited, Select Wealth Management Limited and TAHITO Limited are subsidiaries of the Investment Services Group Limited.

What are the risks of investing?

Risk indicator for the Selected Positive Impact Conservative Portfolio:

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the security's assets goes up and down. A higher risk generally means higher potential returns over time, but more ups and downs along the way.

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

See the Investor Information booklet for more information about the risks associated with investing in this portfolio.

To help you clarify your own attitude to risk, talk to your financial adviser.

Disclaimer: Market index returns have been used to determine the Risk Indicator for the portfolios, as these are not utilised investment vehicles and consequently do not have a unit price that can be used for volatility calculations. The portfolios are comprised of a variety of underlying assets whose actual performance can be expected to vary from the benchmark index used for each asset class. Consequently, the Risk Indicator may therefore provide a less reliable indicator of the potential future volatility of these portfolios.

Minimum investment

- > Initial investment: \$10,000
- > Additional investment: \$2,000
- > Regular investment: \$500 p.m. or \$250 p.m. with a minimum \$10,000 investment.
