

Investment strategy

To provide a solution for investors seeking a diversified investment to grow their capital over the medium term (more than three years) with low to medium volatility.

The portfolio will be weighted towards investment securities that we believe are highly rated for the incorporation of Environmental, Social and Governance (ESG) factors into their investment decision-making.

Investment objectives

- > You are more comfortable with stable investments and are not willing to accept much risk.
- > However, if you have a longer time horizon, you are willing to accept a low to medium level of volatility in your returns over the short term, as long as in the medium term, the value of your capital is preserved.
- > You would accept a potential loss in one year out of every four years.

Projected performance

The after-tax, after management fee expected annual return distribution over the long term (below) is based on index data collected since 1993. Actual performance may be different.

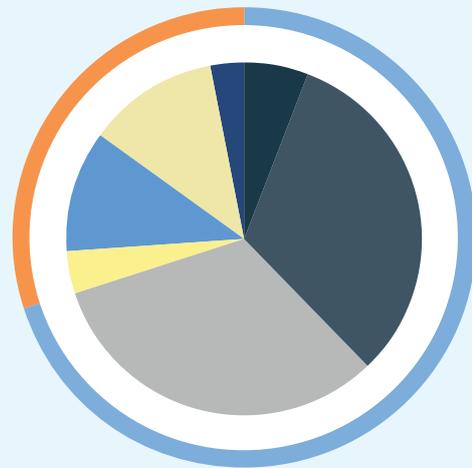

A 28% tax rate is assumed, and the effect of the tax rules on the various asset types is calculated. Management fees are assumed at the index fund level. The Select Service and the Adviser Service Fees are not included.

Mean Annual Return	4.3%
Probability of loss in any one year	15.0%
Years with negative return expected*	1 in 4 years
Expected 10 year return	52%
Expected 20 year return	130%

*The conservative asset allocation expects to have a negative return every 4 years.

Selected Responsible Investment Conservative Portfolio Investment mix as at February 2026 to current

Asset Class	Asset Class %

International Fixed Interest	34.0%
Listed Property	4.0%
Australasian Equities	11.0%
International Equities	12.0%
Other	3.0%

Growth Assets 30% **Income assets 70%**

What are the risks of investing?

Risk indicator for the Selected Responsible Investment Conservative Portfolio:

The risk indicator is rated from 1 (low) to 7 (high). The rating reflects how much the value of the security's assets goes up and down.

A higher risk generally means higher potential returns over time, but more ups and downs along the way.

Note that even the lowest category does not mean a risk-free investment, and there are other risks that are not captured by this rating.

See the Investor Information booklet for more information about the risks associated with investing in this portfolio.

To help you clarify your own attitude to risk, talk to your financial adviser.

Disclaimer: Market index returns have been used to determine the Risk Indicator for the portfolios, as these are not utilised investment vehicles and consequently do not have a unit price that can be used for volatility calculations. The portfolios are comprised of a variety of underlying assets whose actual performance can be expected to vary from the benchmark index used for each asset class. Consequently, the Risk Indicator may therefore provide a less reliable indicator of the potential future volatility of these portfolios.

Assets	Proportion of portfolio %	Country of individual asset
